

WHAT'S IN THE BOX

Note: The port layout on your modem may be slightly different.

HOW TO CONNECT YOUR DSL MODEM

After a DSL connection has been installed in your home by a technician, follow these instructions to connect your DSL modem:

- 1** Connect the **DSL Modem** to the active phone jack on the wall using the **Phone Cable** provided.
- 2** Connect the **DSL Modem** to a power outlet using the **Power Adapter** provided. If the device does not power on, look for a power switch.
- 3** Your DSL Modem will automatically download the proper configuration files. Please wait a few minutes for this step to complete.
- 4** Connect the **DSL Modem** to a computer with an Ethernet port, using the **Ethernet Cable** provided. If your modem has Wi-Fi capabilities, you can also connect wirelessly using the login credentials included with your modem. To change the WiFi settings on your modem, please visit worldline.ca/resources for instructions.

BUNDLE CUSTOMERS ONLY

Only complete Step 5 if you have an Internet & Home Phone Bundle. If you are an Internet-only customer, your setup is complete.

Please Note: VOIP 911 service is different than traditional telephone 911 services. Before dialing 911 make sure you know your address/location. 911 service will not be available if there is a power failure or service outage. For more information, please visit worldline.ca/911.

- 5** Connect the **DSL Modem** to your existing phone using a Phone Cable. **Note:** this is an extra phone cable not included with your modem. You're all done!

Note: Make sure the modem has been connected in the correct order. If you are still having trouble: Unplug the modem and wait 10 seconds. Reconnect the modem again starting at **Step 1**.
